

IN THE SPECIFICATION:

Please amend the paragraph beginning on page 18, line 6, as follows:

Methods for synthesizing ~~[[the]]~~ a polymer compound from the polymer compound represented by general formula (3), ~~which has the compound of general formula (1) or (2), include mainly two methods.~~

The first method is a method of introducing a monomer having a polymerizable functional group into the position of R⁵ to introduce the structure of general formula (1) or (2) into a polymer compound by polymerization reaction thereof, thereby synthesizing the polymer compound. The second method is a method of reacting the compound of general formula (1) or (2) with an acidic group such as a carboxylic acid, a phenol, a hexafluorocarbonol or a fluorine-containing cyclic alcohol group in a polymer compound, thereby introducing general formula (1) or (2) into the polymer compound.
